Professional Summary

Data science and software development student at IIT Madras with hands-on experience in Python, SQL, and machine learning for solving real business problems. Skilled in building end-to-end analytical and web solutions, from data cleaning and modeling to visualization and deployment. Seeking data analyst and data science internships where I can apply analytical thinking to drive data-backed decisions.

Education

Indian Institute of Technology, Madras – Bachelor of Science (B.S.) in Programming and Data Science

Expected Graduation: 2028

Sarvodaya Vidyalaya K-2, CBSE Board, New Delhi – Senior Secondary (Class 12, PCM)

Percentage: 86% | 2022–2023

Prince Public School, CBSE Board, New Delhi – Secondary (Class 10)

Percentage: 86% | 2020–2021

Technical Skills

- Programming: Python, C, Java
- Libraries and Frameworks: Pandas, NumPy, Matplotlib, Scikit-learn, Django, PyTorch
- Web Development: HTML, CSS, JavaScript
- Databases: MySQL, SQL
- Machine Learning: Regression, Classification, Supervised and Unsupervised Learning, Model Evaluation
- Tools: Git, Jupyter Notebook, VS Code, PowerBI, Ms Excel

Projects

Customer Segmentation Analysis

- Engineered a customer segmentation pipeline using K-Means clustering in Python on transactional and demographic data for approximately 1,000 customers.
- Created features such as purchase frequency, average order value, and recency to segment customers into 4–6 distinct behavioral groups.
- Identified high-value segments and proposed targeted campaigns that could improve retention and marketing ROI for top-spending customers.

Financial Performance Analysis

- Analyzed 24–36 months of company financial data (revenue, expenses, profit margins) using Python (Pandas) and Excel.
- Designed and automated data cleaning workflows, including handling missing values, standardizing categories, and creating calculated fields like gross margin and growth rate.
- Built visual dashboards (trend lines, bar charts, and variance analysis) to highlight seasonal patterns, cost spikes, and underperforming segments, supporting data-driven budget recommendations.

MindMate – Emotion-Based Chatbot

- Architected an emotion-aware chatbot using Django and Hugging Face pretrained models to classify user sentiment and generate context-appropriate responses.
- Integrated an API-based inference flow to process user messages in real time and adapt responses based on predicted emotional state.
- Deployed the first version to production (link below), and designed a roadmap for adding realistic voice interaction and improving overall engagement metrics.
